

The Nature of Ideas?

SOME QUESTIONS

- Is an idea simply an electro-chemical brain state?
- Is an idea a non-physical reality in our brain?
- Can both be true? That is, can a physical reality, like an electro-chemical brain state, cause/create a non-physical reality like an idea?
- If so, what's the link between the physical and non-physical?
- Do consciousness and self-awareness play a role in the link?
- How are these questions important for cognitive science, psychology, and even medicine?
