

# CREATE AN ANALOGY

SHOW HOW TWO THINGS ARE SIMILAR IN SEVERAL WAYS

e.g. Snowflakes

1. There are lots and lots of them.
2. They're all chemically identical.
3. Each one's size and shape is unique.
4. Individually they're beautiful.
5. Individually they're also fragile.
6. Collectively they can create beautiful scenes.
7. Collectively they can also destroy and kill.

Snowflakes are *analogous* to what?
