

PARADOXICAL TIME

**PARADOX: A STATEMENT WHICH
IS SELF-CONTRADICTIONARY**

Many prominent physicists tell us that time was created by the Big Bang, the origin of all energy and matter. However, time is such a paradoxical idea that just asking questions about it involves contradiction.

FOR EXAMPLE:

- **When was time created?**
- **Why was it created at one time rather than at another time?**
- **What was before time?**
- **Has time been created more than once?**
- **If so, what was between these creations?**
- **Is time a concept only, or does it have a physical existence?**
- **Is time the presence of something or the absence of something?**
